

**POSITION:** Air Quality Engineer

**Focus:** Air quality assessments for proposed development projects in the Bay Area.

**Experience:** A minimum of 2 to 5 years of professional experience is required and a Bachelor's degree in civil and/or environmental engineering. A Master's degree is preferred.

**Job Description:** Baseline specializes in the preparation of technical studies related to air quality to support environmental review of projects under CEQA/NEPA. Typical projects include residential and commercial development, highways expansion, infrastructure improvements, and master plans. This position would require preparation of air pollution estimates, air dispersion models, and health risks assessments for exposure to toxic air contaminants. This position may also include preparation of research projects for the Bay Area Air Quality Management District. Over time, there may be opportunities to learn technical analyses related to other disciplines, such as soil and groundwater investigations and noise and vibration studies.

Excellent organizational, written, verbal, and interpersonal communication skills and attention to detail are required. Knowledge of software programs and models such as AERMOD, CalEEMod, MatLab, and GIS is preferred. Interest in field work to assist other Baseline staff with soil and groundwater investigations or noise level measurements is also preferred. This position requires a self-directed and independent worker who also enjoys working in a team environment and is eager to take on new challenges!

Baseline offers competitive wages and compensation package, including 401(k), medical, dental, vision, and life insurance, and 10 to 25 days of vacation per year for full-time employees.

Interested applicants should email a resume with a brief cover letter to [info@baseline-env.com](mailto:info@baseline-env.com). We request that applicants refrain from calling or visiting our office.
